Hi Eric,

Here are 2 bullets:

**B3402/C3403 Marina Spill, Jersey City, NJ (Lucarino)** EPA met on-site with representatives from both RPs and the property owner to discuss operations. PSE&G conducted sediment agitation activities in an area immediately adjacent to the bulkhead. The activity proved successful in liberating oil from the sediment, however, the amount of oil liberated was not of sufficient volume to be mechanically recovered, therefore the activity has ceased. PSE&G continues to maintain containment and recovery measures within the marina but has reduced the amount of on-site work from daily to four days per week.

PSE&G has received the results from all air sampling activities. Minimal amounts of tracer fluid which was present in the lines prior to the leak repair was detected, however, the tracer fluid that was added after the repair activities were completed was not detected. PSE&G has collected air samples for approximately five months with similar results. Based on the fact the results for the samples have not appreciably differed over time, no further air samples will be collected.

PSE&G and Con Ed continue to discuss reducing the pressure within the transmission lines. An anticipated date for the operation to begin is still being discussed.

**Sub Base Oil Spill, St. Thomas, USVI (Staiger, Lucarino, Touw)** – DPNR officially requested EPA assistance to stop the discharge of oil into Krum Bay on July 13, 2018. EPA is coordinating the start of on-site work with DPNR. EPA is working to develop a mobilization schedule and plan with contractors and ERT.

Thanks,

Kelli Lucarino
